## OPERATION OF MCC

- The MCC has 14 tubs in two rows having dimension of each tube is 3.9 X 1.8 m X 1.0 m.
- The wet waste collected by Waste collector and the Swachha Karmis are executing the Screening & transported for shredding before shifted to the tub.
- The floor of each tub is Sloped to one drain point for the collection of Leachate.
- The tub in four sides is pasted with cow dung solution for easy process of wet waste and the collected leachate will be sprinkled to every tub twice in a weak in order to quick composting.
- The waste inside the tub is required for turn off regularly by the Swachha Karmis for covering of all waste in the tubs for which the entire wet waste will be covered within the period of 42 days for final organic compost.
- The EM Solution comprising of Jaggery, Curd & Water will be poured in the tub for easy timely composting.
- The Process is to be continued for a period of 42 days and after completion of the said period and the final Processing compost transfer to shivering machine for screening of fine compost and the final Organic compost will go for packing and Sell. i.e
